

Multi-function Carton Packing System

A carton packing line is a type of packaging system that automates the process of forming, filling, sealing, strapping and palletizing cartons for shipment. This type of system is commonly used in manufacturing and distribution facilities that handle large volumes of products that need to be packaged for transport and delivery.

Advantage:

A carton packing line offers a high level of efficiency and consistency in the packing process. By automating the process of forming, filling, sealing, strapping and palletizing cartons, this type of system can reduce labor costs, increase production rates, and improve the overall quality of the finished product.

Technical Parameters:

Product Name	Automatic Carton Packing Line
Size of Large Carton	Customized according to requirements
Packing Speed	120-240 carton/hour
Capacity	1-50 kg/carton
Power Supply	220/380V, 50/60Hz, 6KW
Gas Consumption	0.5--0.7 Mpa, 20L/ Min
