

Vial Capping Machine

This vial capping machine, also called vial capper, is mainly used for aluminum cap sealing of penicillin vials and small infusion bottles.

Features:

1. Its pressure can be easily adjusted.
2. Operators only have to replace a few components to cap bottles of different specifications.
3. Simple structure and strong adaptability.
4. Stable performance, high sealing rate, even capping pressure, good sealing capacity.
5. No need for special maintenance, and one-year warranty period.
6. This vial capping machine is suitable for a wide range of bottles with different specifications.

Main Parameters:

Production Capacity	4800~18000 bottle/hour
Bottle Size	4ml-100ml clinical bottle or infusion bottle
Electric Supply	380V/50hz, 3phase
Power	1kw
