

DPP-250Y Liquid Blister Packing Machine

This machine is suitable for packing the liquid like chocolate, butter and jam etc.

This machine is the latest medicine and food packing machine which has a high quality and a high output. It has the advantages of improving the efficiency and reducing the cost. It is the first-choice packing equipment of producing of vocations such as pharmacy and food.

This machine can be linked to produce with boxing machine and pillow packing machine.

Procedure:

- Forming film of reel support with automatic unwinding system.
- Paten heating system.
- Compressed air forming station.
- Automatic filling device.
- Cover foil reel support with automatic unwinding system cover foil unwinding system.
- Guide rails.
- Sealing station.
- Punching station
- Waste winding unit.

Features

- PLC touch screen control system.
- All materials contact parts are in S.S.316L, The main body of the machine is Fabricated out of SS 304, Meet the GMP standard.
- With automatic liquid feeder.
- Board-shape mould, forming with air pressure, being suitable for standard of any former.
- Roller-thread hot-sealing, good sealing effect, light-electricity location, accurate synchronization.
- Across non-waste sides' punching can save about 200,000 materials every year.

- Production's landscape orientation's output can supply convenience to the boxing machine and pillow packing machine.
- Compact and simple structure.
- Platen sealing.
- Automatic rejection of blisters.
- Alarm system.
- CE certificate.

Technical Parameters

Maximum packing speed	25 times/min
Maximum capacity	400 blisters/min
Forming materials	PVC/PVDC,PET
Maximum forming area	250 x 150 mm
Maximum forming depth	30 mm
Power	5.7 KW
Power supply	AC, 380V/50HZ 3 phase
Air consumption	≥ 0.22 M3/min(self-prepared)
Air pressure	0.6 MPa
Net weight	1500 kg
