

Adhesive Sticker Label Machine GF-SM-M2

The adhesive sticker label machine is applicable for labeling various round bottles made of glass, plastics, metal and so on with accurate positions. Also a coder can be mounted on it to print such identifications as production date, shelf life and product batch number. The machine adopts an intelligent control system and an optimized design, thus featured by easy use and stable performance. In particular it's suitable for labeling and coding products with a small quantity but a great variety.

Sticker machine function:

implementation in the product circular face, a small cone surface, automatically attached stickers, stickers film; product labeling, foil adhesion efficiency, location accuracy, quality, high stability; avoid manual labeling, foil and low efficiency, attached skew, foaming and folds, irregular attachment location a series of questions; effectively reduce product cost, improve product identification aesthetics, increase product competitiveness.

Sticker machine advantages:

1. Horizontal labeling approach, comprehensive implementation of the round bottle, small bottle of the week to taper, and a half weeks to the label; Adhesive Labeling machine efficiency up to 400 bottles / minute, a lot of savings in manpower and resources;
2. Labeling speed, conveyor speed, sub-bottle stepless speed, convenience of production personnel need to be adjusted according to actual; Automatic bottle features are used to achieve sub-bottles round, divided bottle safe and effective; switch to the production of different diameter bottles, simply replace the sub-round production of a bottle;
3. Combination of mechanical and structural adjustment of some of the clever design of the winding labels, labeling position flexibility to facilitate fine-tuning (adjusted fully fixed), so that the conversion between different products and labeling of winding simple, time-saving;

4. Standard PLC + touch screen + Stepper Motor + standard sensor electronic control system control and high safety, man-machine interface and improve the entire Chinese notes the failure prompt function, operation guidance function; easy to use, easy maintenance;
5. Equipment for complete information (including the device structure, principle, operation, maintenance, repairs, upgrades and other descriptive information) to the normal operation of equipment to provide adequate protection;
6. The production time for this adhesive labeling machine is 22 days usually.
