

Cream Filling and Sealing Machine

This cream filling and sealing machine is specially designed for cub lose bottles and other large-mouth bottles, and it can automatically finish the work of bottle feeding, filling, capping, and sealing. Its rotary valve structure is quite suitable for filling cream and liquids with small particles.

Its main components are valve filling device, 4 filling heads, one capping head, and control system. And it should adopt box packing and container transport.

Features:

1. Compact structure, stable performance, high reliability and good applicability.
2. Combination of filling and sealing device.
3. Its one-button control makes its operation easy.
4. With many detachable parts, this cream filling and sealing machine is easy and convenient to maintain.

Main Parameters:

Bottle Size	cream bottle
Production Capacity	2400~3000 bottle/hour
Package Accuracy	0~2%
Rate of Sealing	≥99%
Power	2KW
Electric Supply	380V/50hz, 3phase
