

MIC 18-18-1 Craft Beer Filling Machine

MIC 18-18-1 craft Beer Filling Machine (800-1500BPH) are the aseptic filling equipment for the pure beer, designed and developed on the basis of introducing the technology from Germany and combining the features in the production industry of pure beer in China. This machine is of good reliability of mechanical operation, perfect functions in rinsing, filling, capping, disinfecting and sterilizing, realizing filling the sterile beer into the sterile container in a sterile environment

1. This equipment is automatic washing filling capping three in one machine. Its of many advantages, such as compact structure, perfect control system and easy to be operated. Advanced touch screen and PLC control system makes man-machine communication true.
2. Washing part is mainly composed of washing pump, bottle clamps, water distributor, up turn-plate, guide rail, protection cover, spraying device, defrosting tray, rinse water take and rinse water refluxing tank.
3. Filling part is mainly composed of filling barrel, filling valve (low temperature and isobar filling), filling pump, bottle hanging device / bottle pedestals, guide rail, elevating device, liquid indicator, pressure gauge, pressure regulator, etc.
4. Capping part is mainly composed of capping heads, cap loader (separated), cap unscrambler, cap drop rail, pressure regular, cylinder and also we need an air compressor as the auxiliary external equipment.
5. Main electrical components are all imported from world famous brands to guarantee excellent performance of the whole machine.

Parameters

Rising Heads	18 Pieces
Filling Heads	18 Pieces
Capping Heads	1 Piece
Filling SPeed	1000-2500 BPH
