

NJP-1200C Fully Automatic Capsule Filling Machine

NJP-1200C automatic capsule filling machine is used for filling various capsules. Its output is 1200 capsules per minute. This pharmaceutical capsule filler can automatically complete positioning, separating, filling, waster capsule rejecting, locking and finished capsule ejecting. Automatic capsule filling machine is the ideal equipment for filling capsules especially in medium and small pharmaceutical factory, hospital preparation lab, and so on.

Characteristics

1. This automatic pharmaceutical capsule filler has been improved with longer usage life and high filling precision.
2. NJP-1200C automatic capsule filling machine is controlled by computer. Stepless frequency-conversion timing and numeral showing result in easy operation.
3. The working station cam runs under good lubricating conditions and maintains the inner lubrication of cam slot to a full extent, which contributes to increase the pressure of pulverization oil pump and extend the operation life of the spare parts.
4. The capsule qualified rate of this pharmaceutical capsule filler is higher than 99%.
5. With click-moving control system, automatic capsule filling machine is easier to operate and clean.
6. It is designed and manufactured in accordance with GMP standard.

Parameters

1. Output: 1200 capsule/min
2. No. of Segment Bores: 9
3. Suitable for Capsule: 00-4
4. Total Powder: 5 kW
5. Overall Weight: 1100 kg
6. Overall Dimension: 960 × 1000 × 1900 (mm)
