

Vertical ring cartoning machine BCLZ80-03

The main difference between the ring intermittent vertical cartoning machine and the horizontal cartoning machine is that the product enters the box vertically from the top of the box, which is suitable for cartoning items in the food, cosmetics and daily necessities industries. It realizes high speed production of vertical cartoning. It is mainly developed and designed for products that cannot enter the box lying down.

Features:

- The machine runs stably and reliably, and it is very convenient to change and adjust different sizes of cartons.
- It can automatically complete the functions of opening the carton, putting the products into the carton, printing the batch number, sealing the carton, and automatically outputting the finished carton.
- With balcony type structure, the working area and transmission area are separated to prevent cross contamination and facilitate daily cleaning.
- The main parts of this machine are made of high quality 304 stainless steel and aluminum alloy.
- Equipped with transparent protection door, which is more safe and reliable.
- Adopt human-machine interface and PLC control. Make the operation and maintenance more simple.

Technical Parameters:

Model	BCLZ80-03
Maximum capacity	80 box/min
Carton size range	MAX : 180*110*65mm MIN:75*35*35mm
Voltage	3P 220/380V 50/60HZ
Power	3KW
Air pressure	0.5~0.8MPa
Weight	1700kg
Machine size	L:3200mm W:1600mm H:1900mm
