

MIC Manual Beer Can Packaging Machine

The machine is suitable for sealing cans of various sizes, the liquid does not overflow during the sealing process, the tank itself does not rotate, and the sealing is closer.

The sealing speed of the machine can reach 1800Pcs/hour, the power is only 0.55KW, and the power consumption is small.

The machine body is small in size, saving space, low in cost but high in efficiency, we can customize the most suitable machine for you according to the different needs of customers. The beer can packaging machine has revolutionized the canning process in the brewing industry, providing breweries with an automated solution to streamline operations and maintain the highest quality standards. By leveraging speed, precision, and versatility, this advanced equipment enables breweries to efficiently package their products in cans, meeting the growing demand for craft beer. By investing in a beer can packaging machine, breweries can enhance their productivity, reduce waste, and deliver an exceptional product to consumers, solidifying their position in the competitive brewing market.

Parameters

Weight	52kg
Voltage	220V 50Hz
Packaging Type	CANS, Bottles
Dimension	255*455*608mm
Motor power	0.55KW
Filling speed	30 cans each minute
