

## *GDP-24 Automatic Mineral Water Filling Capping Machine*

### **Products Description**

1. This Automatic Mineral Water Filling Capping Machine is mainly used for bottle filling of wine, Fruit juice, beverages soy sauce, vinegar, etc. It can be used separately or in conjunction with the production line.
2. The Automatic Mineral Water Filling Capping Machine is a rotary automatic low vacuum filling machine with high filling speed and precision. It is an ideal filling equipment for bottled liquids in wine, vinegar, soy sauce and beverage industries.
3. The liquid level control mechanism of the material storage tank is buoy type, with simple structure and reliable operation.
4. The middle pillar is adjustable and can satisfy the filling of bottles with height of 160-360 mm without changing parts. Replacement of parts, can adapt to different diameter bottle filling.
5. There is an overload protection device at the dial wheel in and out of the bottle. When the bottle is stuck, the device will stop automatically. Only after the bottle is reset manually, the device can start and run normally, so as to ensure the safety of the equipment and operation.
6. The main exposed parts of the Automatic Mineral Water Filling Capping Machine are made of stainless steel or nylon, with beautiful appearance. The transmission parts are placed in the body, with compact structure, stable movement and low noise.

## Technical parameter

Model	GDP-24
	Automatic Mineral Water Filling Capping Machine
Capacity	About 5500 BPH
Filling heads	24
Suitable bottle height	120-300mm
Bottle diameter	Φ50-Φ100
Error	±1.5mm level
Power	1.5kw
Machine weight	2000kg
