

DC-889 High-speed Powder and Granule (Three-side Seal) Automatic Packaging Machine

The rotary system automatically forms bags, fills them, seals the edges, and counts them horizontally, with a machine speed of 300-460 bags per minute. The bags produced by the machine have aesthetically pleasing and tight seals.

The machine is equipped with an automatic film feeding device to reduce film changing time and improve production efficiency. The machine provides a longer filling time, minimizing material trapping in the sealing area. It can produce single bags or continuous bags, making it widely applicable to food, pharmaceutical, and chemical products.

Technical Parameters

Model	DC-889
Bagging Size	Width: 30-110mm Length: 40-125mm
Filling Capacity	0.5-50g
Production Speed	400-1200 bags/minute
