

## *Semi-Automatic Shrink Film Packing Machine For Food Beverage*

Semi-automatic shrink film packaging machine is a continuous film roll, according to the required length of the film cut to the vacuum suction of the plastic film transported to the bottom of a group of containers, containers continue to move forward while the plastic film wrapped by the lever Container and superimposes the end of the film onto the plastic film over the container.

Followed by the plastic film-coated container being fed into the heating channel and finally forming the automated packaging technology for the film wrapping product. Including container feeding, container grouping arrangement, film unwinding device, film cutting system, film conveying, shrink film winding and shrinking furnace. Can be packaged in different containers, such as: plastic bottles, glass bottles, cans, jars or a number of small packages.

### **Technical Data**

Capacity	3-4 pcs per minutes
Max. packing size	420*400*350mm (L*W*H)
Suitable plastic film thickness	0.03-0.15mm
Heating temperature	260 degrees adjustable
Working pressure	0.6-0.8Mpa
Input Power	3PH 380V 50HZ
Motor power	22kw
Tunnel size	2530*920*1800mm(L*W*H)
Packing head size	1500*1100*1900mm(L*W*H)
