Automatic Thermoforming Packing Line

1 Bottom film rolling system
Special film tensioning structure and sensor.
Film stabilized on the air swelling shaft

2 Thermoforming area

Anodized aluminium mold and special heating plate can keep the forming smooth and in good quality.

3 Loading area

Basic loading area length 1.2m. Can be customized.

4 Control panel

DELTA PLC and touch screen with great quality and stability. It can sustain high stress work.

(5) Top/Leading film rolling system
Special film tensioning system with sensor.
Film stabilized on the air swelling shaft

6 Sealing area

Anodized aluminium sealing mold with sensor detecting the piston position.

Outting area

Special cutting system used for different material. With rigid bottom film we often use punch cutting. With flexible bottom film we often use cross and vertical cutting.

® Waste film collecting and product output conveyor

3

Features

- Stainless steel construction make the machine more durable and more smooth.
- New waste film collector.
- Touch screen control panel.
- Easy accessiblity of machine frame.
- Flexible in use of material, mold and cutting system.
- Patented cutting knife.
- Modular design.
- Friendly to most of additional mechanism, such as filling system, conveyor system, printing system...with options below:
 - Filler
 - Weiaher
 - Vibrator
 - Recycle Water Cooling System
 - Photoelectric Sensor
 - Printer
 - Additional Vacuum Pump
 - Power Voltage customized
- Multiple choices for thermoform films:
 - Flexible and rigid containers
 - Sealable monofilms, multilayer films, foamed films, laminates with an aluminium layer, paper and Tyvek webs

- Customizable in size, loading area, printing area adjustable for special need.
- Patent punch cutting mold can make the edge of tray much more smooth.
- Minimum (20mm×50mm) and maximum (600mm×300mm) size modified, various kind of product or amount of product can be packed.
- With the world's most advanced technology of thermoforming system, packing depth can reach 150mm (max)
 (if the short side length is less than 150mm, the depth is less than the short side length by 0.6; if the short side length exceeds 150mm, the max depth is 90mm.)

5

Working Procedure Diagram

POSITION OF EACH PART OF THE MACHINE tensioning structure with photocell banchmarking WILL BE VARY DEPENDING ON SPECIFIC PRODUCT AND REQUEST. FINAL PRODUCT OUTLET Cross cutting station SEALING STATION THERMOFORMING STATION Thermoforming station can be different with rigid film or flexible film. LONGITUDINAL CUTTING STATION Easy switch design makes the longitudinal cutting knife easy to lift and easy to clean the station chamber LOADING AREA Manual product loading & automatic loading/filling system can be integrated onto this machine Most parts of the machine have easy BOTTOM FILM ROLLING SYSTEM CHANGE DESIGN INCLUDING LONGITUDINAL Easy to put on a new bottom film with a diagram showing CUTTING, CROSS CUTTING, SEALING MOLD, how to put the film across the tensioning structure FORMING MOLD. BOTTOM FILM AND TOP FILM HAVE SPECIAL TENSIONING DEVICE TO MAKE SURE THE FILM

ROLLING AND INFEEDING SMOOTHLY.

TOP/LEADING FILM

Top/Leading film have a special designed

RIGID FILM PUNCH CUTTING SYSTEM

When customer use rigid film thermoforming machine The cutting station should be replaced with punch cutting system as above.

THE WHOLE MACHINE IS EASY TO ACCESS WITH EASY LIFTING DOORS, INTERNAL PARTS ARE ALL CODED AND RECORDED IN FILES. MAJOR INTERNAL COMPONENTS ARE HIGHLY REPLACABLE BECAUSE WE USE WORLD CLASS TOP BRANDS. IT GUARANTEES THE STABILITY AND SMOOTH WORKING PROCEDURE MAKES THE PACKAGE IN GOOD QUALITY.

THE SHAPE, SIZE, FUNCTION, NUMBER AND

DUE TO CUSTOMIZABILITY, THIS MACHINE WILL HAVE SOME DIFFERENCE IN EACH WORKING STATION.

PACKING METHOD

Packing method on thermoforming machine can be devided into several parts as below:

1. RIGID TRAY PACKING SUITABLE FOR MOST OF FOOD PRODUCT WITH OR WITHOUT LIQUID

The rigid pack have many benefits such as long shelf life, easy to contain, do not change the shape of product, mixed gas maintain and nice looking package.

3. BLISTER PACKING

BLISTER PACK IS SUITABLE FOR ELECTRICAL PRODCT, STATIONARY PRODUCTS AND TOOLS

For thermoforming machine blister packing will be limited in shapes that have sealing rim like medical pills and capsules

2.FLEXIBLE BAG PACKING SUITABLE FOR PRODUCTS WITH LARGE AMOUNT

WHICH REQUIRES VOLUME DECREASE

Flexible pack can be easily stored and have a minimum volume saves a lot of space. It also can prolong the shelf life of product

4.SKIN PACKING SKIN PACK IS A CHANGED FORM OF RIGID TRAY PACKING

Skin pack use rigid bottom film to form a shallow tray to contain the product and covered with a shrinkable top film

PRODUCT CATEGORY

Fresh Meat & Poultry

Seafood

Dry Fruit

Pasta

Cheese

Sausage

Sausage

Dates

Tofu

OTHER SNACK FOOD, MEDICAL PRODUCTS
ELECTRICAL PRODUCTS, PRESERVED FOOD
AND VEGITABLES ETC ARE ALSO SUITABLE
FOR THIS MACHINE.

Utien Pack Co., Ltd. was established in 1994. The company is located in the historical city of shaoxing. We specialize in developping and manufacturing thermoforming packaging machinery, sealing, filling machines and advanced related products. Global sales extend throughout Europe , USA, Asia Pacific and local China regions. We provide the highest quality manufacturing and service through innovation and technology.
