

## *NJP-600C, NJP-800C Automatic Hard Capsule Filling Machine*

This machine is an intermittent motion and hole plate type filling fully automatic capsule filling Equipment.

This machine adopts optimization design combined the characteristics of Chinese medicine and The requirement of GMP, It has the characteristics of compact mechanism, small volume, low noise, precision filling dosage, multifunction, running stably etc.

This machine can finish the following motion at the same time: capsule feeding, capsule separating, powder filling, capsule rejecting, capsule locking, finished capsule discharge and module cleaning etc.

This machine is the most ideal hard capsule filling equipment for pharmaceutical and health food Industries.

### **Features**

- All parts contact with the medicine powder and capsule are made of high quality stainless steel.
- The main parts adopt international advanced products such as LKO bearings, OMRON and ATMEL electric components etc.
- The dosage can be adjusted easily and reliably.
- Easy to replacing the moulds.
- Adopts cambered surface can dividing structure, compact structure, low noise, circulates steady, maintenance convenience.

## Technical Parameters

Model	NJP-600C	NJP-800C
Production capacity	36000 capsules/hour	48000 capsules/hour
Applied capsule size	00# - 5# and safety capsule A-E	
Filling type	Powder, granule, tablet	
Power	5.05 KW	
Power supply	380/220V ,50/60HZ	
Vacuum	30 M3/H-0.02-0.05MPa	
Dust absorption	1000 M3/H2X105PA	
Noise	< 75 dB	
Net weight	800 kg	
Overall size	920x785x1900 mm
